

FIELD TRIP

Outing, Wildlife, Adventure

LEARNING OBJECTIVE:

To develop curiosity about wildlife and farm animals among young learners.

Our KG students went on an exciting and educational field trip to Sharjah Desert Park. The children enthusiastically observed various species, including reptiles, colorful birds, and animals such as the cheetah and baboon. Seeing these animals up close helped the children connect their classroom learning to real-life experiences and sparked their curiosity about wildlife and nature.

Later, the children enjoyed a special hands-on session where they fed farm animals such as horses, cows, goats, and sheep. This joyful interaction allowed them to learn more about farm animals while developing kindness and responsibility towards living beings. The children were thrilled to touch, feed, and observe the animals, which also helped build their confidence and communication skills.

Overall, the trip was both fun and enriching, providing meaningful learning beyond the classroom. It was truly a memorable experience that encouraged exploration, curiosity, and a love for nature among our young learners.

LEARNING OUTCOME:

Students confidently interacted with animals and peers.
